Bar's Leaks

Auto Tech Paint & Body, Lakeland, FL

JR DRAG RACING

If you haven't seen a Jr. Dragster, then you haven't seen the future of the NHRA and IHRA drag racing. The Jr. Racing League offers kids ages 8-17 a chance to race in a controlled environment at hundreds of tracks throughout the United States and Canada before they can obtain a state drivers license.

The cars that Jr. Drag Racing League competitors race are called Jr. Dragsters and half-scale versions of Top Fuel dragsters. Using a five-horsepower, single-cylinder engine, a Jr. Dragster can go as fast as 85 mph and go as quick as 7.90 seconds in an eighth-mile.

Competition in the Jr. Drag Racing League is equalized by a handicapped starting system, and classes are usually split into age groups, which helps keep racers of the same skill level together. The division is designed to help build the ranks of tomorrow's stars while providing a fun family activity.

BAR'S LEAKS

Racing teams on a variety of circuits depend on Bar's Leaks to keep their vehicles running smoothly and to prevent leaks. Headquartered in Holly, Michigan, the company has been manufacturing top quality chemical products since 1947 and currently has plant locations throughout the world including Canada, Japan, Spain, South Africa, Australia and New Zealand, in addition to the United States.

Whether it's in a race car or the family grocery getter, chances are you've come in contact with a Bar's Leaks product. Bar's Leaks is factory installed by leading car and truck manufacturers to guard against cooling system leaks. The Bar's Leaks line includes stop leak solutions for radiator & cooling systems as well as engine, transmission, power steering and even head gasket repair.
